

Experts in water.

**DAVEY**

## APPLICATIONS

Ideal for supplying soft water to :-

- make cleaning easier
- make clothes and hair softer
- reduce scale in pipes and appliances

## WHY CHOOSE THE Davey Kinetico Water Softeners?

### NON ELECTRIC

Only Davey Kinetico uses the kinetic energy of moving water to power its system instead of electricity – thanks to the patented turbine. So you'll never have to worry about costly repairs or higher electricity bills.

### 24/7

Our twin tank design allows our system to backwash without ever going offline, for round the clock operation. You'll never be interrupted or inconvenienced by regeneration.

### METERED REGENERATION

Based on your water hardness, the system measures water use to accurately determine when it's time to regenerate with clock like precision, resulting in up to 20% less waste water and up to 40% savings in salt. Your softener automatically adjusts to your water use patterns.

### SOFT WATER RINSE

Uses only soft conditioned water to clean the media, which extends the life of the system.

### COUNTER CURRENT REGENERATION

Unlike most other systems, ours regenerates in counter-current mode, a more even and efficient use of resin beads, resulting in less waste water, less salt use and a longer lasting system.

## Davey® Kinetico® Water Softeners

Model Numbers:

MACH2020cHF, MACH2025s  
MACH2060s, MACH2060s OD

Davey's Kinetico water softeners are a hard working non-electric design offering continuous supply of soft water using a twin tank system.

SPECIFICATIONS				
				
MODEL	MACH2020cHF	MACH2025s	MACH2060s	
INLET WATER QUALITY				
Pressure Range	1.0-8.6 Bar	1.0-8.6 Bar	1.0-8.6 Bar	
Temperature Range	2 - 49°C	2 - 49°C	2 - 49°C	
pH Range	5 - 10 SU	5 - 10 SU	5 - 10 SU

## OPERATING PROFILE

The softener can remove hardness to less than 9 mg/l when operated in accordance with the operating instructions. The system comprises two tanks. This duplex configuration operates with one tank on-line during service.

During regeneration cycles, one tank provides water to service and to the regenerating tank. An internal water meter initiates system regeneration. The water meter measures the processed volume and can be adjusted based on water hardness to be treated. Service flow is down-flow and regeneration flow is up-flow.

## REGENERATION CONTROL VALVE

The regeneration control valve is mounted on top of the media tank, and manufactured from non-corrosive materials. A control valve provides service and regeneration control for two media tanks. Inlet and outlet ports accept a quick connect, double o-ring sealed adapter. Interconnection between tanks is made through the regeneration valve with a quick connect adapter. The control valve operates using a minimum inlet pressure of 1 Bar. Pressure is used to drive all valve functions. No electric hook-up is required. The control valve incorporates four operational cycles: service, brine draw, slow rinse, and a combined fast rinse and brine refill. The brine cycle is up-flow, opposite the service flow, providing a counter current regeneration (opposite for MACH2020cHF). The control valve contains a fixed orifice eductor nozzle and self-adjusting backwash flow control. The control valve will prevent the bypass of hard water to service during the regeneration cycle.

## MEDIA TANKS

The tanks are designed for a maximum working pressure of 8.6 Bar and hydrostatically tested at 20.7 Bar. Tanks are made of engineered plastic with a 63.5mm threaded top opening. The tanks are NSF approved. The upper distribution system is a slot design. The lower distribution system is a flat plate design. Distributors will provide even flow of regeneration water and the collection of processed water.

## CONDITIONING MEDIA

Each softener includes non solvent cation resin (except MACH2020cHF with a uniform cation bed) having a minimum exchange capacity of 18 g/l when regenerated with 240.3g/l.

## BRINE SYSTEM

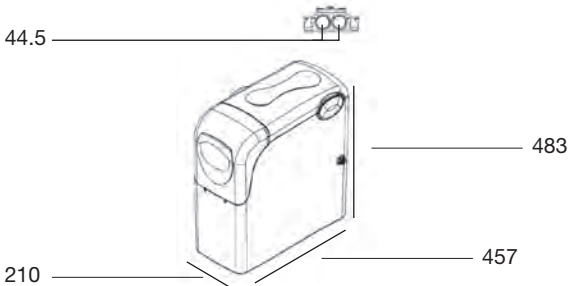

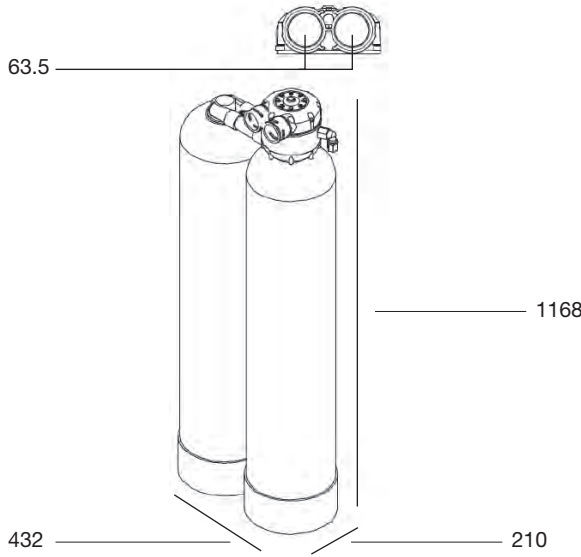

The combination salt storage and brine production tank is manufactured of corrosion-resistant plastic. The brine tank has a chamber to house the brine valve assembly. The brine float assembly allows for adjustable salt settings and provides for a shut-off to the brine refill. The brine tank includes a safety overflow connection to be plumbed to a suitable drain.
